Knowledge and Understanding: The selected topic is a good one. However, look at the selected title. To me, you could have redesigned the title to make it more meaningful. I must commend that you have produced an extensive knowledge and understanding of the context. However, the issue is your overall review becomes more essay-type of presentation. I would suggest you start using relevant headings and sub-headings of the context and then present your literature to make it more attractive and improve the quality. You could have also paid some focus on research design and methods.

Criticality: Some critical discussions, analyses, and evaluations are evident. However, to me, you have the opportunity to make a more in-depth critical review.

Academic Integrity: It is evident that you have used relevant academic sources and produced relevant information in relation to the selected topic. However, you must pay attention to the similarity

Use of Sources: You have used an adequate number of academic sources. However, a few of the sources are outdated, which must not have been used. Going forward, try not to use those sources, which are more than 5 years old.

Structure & Presentation: To me, your structure and presentation is a bit poorer. I would suggest you use appropriate headings and sub-headings while reviewing the literature. Please note, that your literature review should be either systematic or narrative but adding headings and sub-headings makes your review clearer to the readers.
